

# Climate Justice Convergence Centre: Montreal

Sunday, 27 November 2005

27th November-8th Dec 2005

The Climate Justice Convergence Centre was a space where the voices of those struggling against oil and coal extraction, refineries, pollution 'offset' projects, a destabilized climate, oil wars and all the other effects of fossil fuel dependence were heard. Photo-exhibitions, films, speakers and workshops will examine issues ranging from energy use to tree plantations to the World Bank, the G8, carbon trading, nuclear power and genetic engineering.
