Hoodwinked in the Hothouse: False Solutions to Climate Change â€“ Available now!

by Rising Tide North America and Carbon Trade Watch
Tuesday, 06 July 2010

Rising Tide North America and Carbon Trade Watch are pleased to announce the 2nd edition of Hoodwinked in the Hothouse: False Solutions to Climate Change.

This 28-page booklet provides a close-to-comprehensive overview of false solutions to climate change. Fifteen concise articlesâ€”complete with photos and illustrationsâ€”cover more than 20 false solutions to climate change, from Clean Coal to Biomass incineration, providing an easy-to-read introduction to the ever expanding market place of climate crisis technofixes.

With the incredible pace of the climate policy debate, the 2nd edition provides key updates to crucial topics like REDD (a major new commodification of forests and lands), which was just emerging at the time of initial publication.

Equally important, the booklet expands to more technologies that are being branded as â€œgreenâ€• despite the grave dangers associated with them, such as waste incineration, biochar, and genetically engineered â€œcarbon suckingâ€• trees. Weâ€™ve also included much more information on real solutions and positive steps communities can we can take to stop the climate crisis.

The booklet includes contributions from ETC Group, the Indigenous Environmental Network, Movement Generation, the Global Alliance for Incinerator Alternatives, and International Rivers as well as art and photography from across the movement for climate justice.
